## Research Interest

Current research: Aiming to develop deep learning-based approaches in automatic sleep stage classification tasks (e.g., class imbalance problem, interpretability, rapid sleep stage classification, etc) from single-channel electroencephalogram (EEG) data, which mainly concerned on:

1. EEG/EMG, etc.
2. Time-frequency analysis: Wavelet transform, short-time Fourier transform (STFT), etc.
3. Deep learning methods: Convolutional Neural Network (CNN), Long Short-Term Memory (LSTM), Transformer, etc.
4. Model interpretability: Layer-wise Relevance Propagation, etc.
5. Class imbalance problem: Data augmentation, etc
